
Data analysisi process
Problem statement
-New CEO has been appointed
-The mission is to grow the company's revenue and product performance
Ask data driven questions
-Which products are bought more or generates more revenue
-What time of the day does the store get busy or performs best
-What are sales trends on the products
Data Inspection
-Bright coffee shop sales
-The data set has transactional information from the bright coffee shop
-The action required is that i inspect the dataset before processing
Data collection
-Coffee shop sales
-Product Information
-Transaction quantity
-Unit price
-Transaction time
ETL
-Extracts data from the coffee shop's database
-Transform and clean the data
-Load processed data for analysis
-Preparation of the data
Data processing -data bricks
-Processing the dataset into data bricks
Data analysis
-Product analysis(Which products are bought the most and which products are hardly sold or bought)
-Revenue(How much each product cost)
-time (Peak sales times)
Data visualization
-Graphs
-pivot tables
-Charts
with the use of-Data studio
-Powerbi
PRESENTATION
-Showing my key findings
-Performance (Sales and product)
-Recommendations(Solution) eg.working with the marketing department to help market the products
-Working with legal-Ensuring that we do everything according to the law and we don't violate any rules
